## iHomefinder QuickStart Program

Get a jump start on setting up your iHomefinder account! In this scheduled 30-minute session, your Customer Success Manager will work with you or your web developer to set up and customize key IDX features on your site. The result – you are up and running fast!

### **Markets (saved searches)**

Three galleries of listings will be set up and added to your site, each using search criteria you define.

### **Lead capture & user registration settings**

All lead capture options will be reviewed and adjusted to your personal preferences, including user registration prompts, email alert registration popups, and property organizer registration links.

### **Featured listings**

Your unique agent and/or office codes will be added to populate featured listings. A featured listings page and a featured listings gallery of your choice will be added to your site.

### **Communities menu**

Three communities of your choice will be added to the “Communities” menu to demonstrate how quickly you can add listings to your site with this feature (for Power, Broker and Gold Agent plans using WordPress).

### **SEO city links**

Three links will be added to demonstrate how quickly this feature adds additional pages of listings for search engines to index on your website.

### **IDX page titles and meta tags**

We’ll define the options available to you for customizing these important SEO tags on your IDX pages.

### **Contact information and forms**

Your preferred contact information will be added to all contact information within IDX pages.

### **Featured listings branding**

Your logo will be uploaded and applied to your own listings.
